Neural Organization Technique

Neural Organization Technique is both a diagnostic and treatment protocol based in kinesiological methodology designed to address most of the health problems, which can befall the human condition whether they be neuro-musculo-skeletal, neurological, immunological or cognitive.

Based on the neurological sequences of the primary survival functions, Feeding, Fight/Flight, Reproduction, Dr Carl Ferreri's technique is one of the most remarkable tools for those wishing to manage chronic and difficult problems.

He has drawn from Applied Kinesiology (AK), Sacro-Occipital Technique (SOT), Upledger cranial techniques and Chinese Medicine to synthesize something new. With N.O.T. you will be able to explain to your stressed patients where their problems may originate, why their conditions present the way they do, and how you are going to help them through a very precise protocol.

N.O.T. will increase your understanding of how the body truly works. It takes into consideration most of the factors and conditions which can influence the body's reactions. Practitioners who have trained in N.O.T. have consistently found that when this technique has been properly applied to help reorganize their patient's nervous system, other treatment modalities become more effective and efficient.

Therefore N.O.T. is complementary to any practice style and will also enlarge your scope of practice.

Module One: STRUCTURAL

1 st neurological Unit

- Atlas mobility
- Category I: Dural adaptation in reaction to a stressor.
- Switches
- Universal cranial fault: Its importance in all systemic, autoimmune & genetic problems...
- Head and pelvis centering reflexes: Neuro – anatomical support and relation to primary functions.
- Universal Cranial Fault / Lateral Occiput & Anterior Atlas
- Anterior Femur Head Subluxation and Iliotibial Ligament

2 nd neurological Unit

- Cranial Injury Complex: Relation to chronic cervical problems & the characteristic reactive muscular chain.

3 rd neurological Unit

The temporo-mandibular joint: An approach to this joint in relation to the primary functions.

- Universal jaw I: Its relation with hypo-tonicity of muscles below the diaphragm.
- Universal jaw II: Its relation with diaphragm and perineal muscles.

4 - 6 th neurological Unit

- Defensive jaw (Emotional / pain control) / Coccygeal release for Dura.
- Fascial defense system
- The Pelvic Injury Complex: A very important step to fix chronic sacro-iliac problems.
- Structural jaw complex / Category II: Connection between S.I. joints, T.M.J. and the skull.
- Category III: Lumbar and disc involvements.

7 th neurological Unit The Idiopathic Scoliosis

A neurological approach as a compensatory reaction to a deficit created into the vestibulo-ocular route, with the typical muscular reactive chain. Even if the scoliosis protocol is first involved in a structural way, it can also be related to an emotional stress.

Module Two: METABOLIC

- Review of Module 1

8 th neurological Unit

The Limbic/Immune System Complex:

- Posterior Immune: Limbic vertebral/ spinal fixation pattern.
- Anterior Immune: Glandular and Organic Sections, Digestive and Adrenal steps.
„in relation to“ environmental and/or food allergies or reactions.

9 th neurological Unit

- Digestive Jaw: Its relation with the digestive steps.
 - Hiatal Hernia
 - Chronic valve problems: ICV, cardia, pyloric and Houston valves.

10 th neurological Unit

The Endocrine System: A functional approach in relation to the primary functions.

- « Mini » Endocrine program
- Primary Endocrine program - Access to a circulatory deficit / adrenal's balance.
- Liver congestion / Lymphatic drainage of breasts

The Cardiac Back Syndrome: A common finding in persons under physical and/or emotional stress.

This protocol is very important, as it is one of the first signs of impending heart troubles.

- CB posterior / Spinal fixation
- CB anterior / Glandular, digestive and adrenal sections
- Peripheral circulation balance.

Module Three: LEARNING DISABILITIES (L.D.)

- Review of Module 1 and 2
- Learning Disabilities

How to help patients presenting learning disabilities, behavioural troubles, hyperactivity, emotional stress, etc..... Very useful if you work with disabled and/or gifted children

- Cranial section
- Vestibulo / ocular reflex system and Spheno-palatine component
- Auditory processing component
- Peripheral visual and auditory distractibility tests
- Directions of eye muscle fault in dyslexia
- Special section for A.D.D. and A.D.H.D

- Emotional Clearing Techniques.
- Extremities: Demonstration of Joint interlinks for those with manual skills.

These seminars are structured to give you plenty of hands on time, so that you can have the confidence to use in your office immediately.

Life is Motion

Registration for Seminars

Seminar Dates:

Module 1 September 18-21-2014 28 hours

Venue:

76863 Herxheim, Germany

Local Contact:

Evelyne Rupp

Geschwister-Scholl-Str. 44 76863 Herxheim

+49 7276-5030710 Moblie: +49 174 9693119

Payment:

Module 1 - 700€

Repeaters 30% discount =

Please send Registration to evelyne58@me.com

If questions arise please feel free to contact me. I have pre-reserved rooms in a local B%B.

Looking forward to meeting you and having a successful seminar! E. Rupp
